अभ्यास के बिना जीवन में सफलता नहीं मिलती। पहली बार प्रत्येक कार्य कुछ काल लगता है। यदि व्यक्ति उस कार्य को कठिन समझकर बैठ जाता है तो उसे कभी भी कर सकता। अमेरिका के राष्ट्रपति ने अभ्यास-क्रम नहीं छोड़ा और एक दिन राष्ट्रपति पद प्राप्त कर लिया। यदि हम अभ्यास करना छोड़ देंगे तो सफलता हमें छोड़ देगी। मुहम्मद गौरी ने पृथ्वीराज चौहान पर विजय पाने के लिए सत्रह बार प्रयत्न किया और अंत में सफल हो गया। निरंतर अभ्यास एक ऐसी कुंजी है, जो मनुष्य के लिए सफल के द्वार खोल देती है। अभ्यास से विद्या अमृत बन जाती है तो बिना अभ्यास के विद्या विष का रूप धारण कर लेती है। जो मनुष्य अभ्यास नहीं करता उसके पास विद्या अधिक समय तक नहीं टिकती। बहुत बड़ा गणितज्ञ भी यदि अभ्यास छोड़ देगा तो गणित उसे छोड़ देगा। खिलाड़ी यदि खेल का अभ्यास नहीं करेगा तो कभी भी कीर्तिमान स्थापित नहीं कर पाएगा। अतः अभ्यास अवश्य करना चाहिए।

3. One day, he decided to make popsicles and asked his dad to film him. His dad was impressed with Kicha's skills and instructions, and decided to upload the video on Facebook. Today, Kicha's channel has almost 40k subscribers and more than 100 recipes for delicious items such as oatmeal cookies, coconut payasam, rainbow idli, ice-cream and cakes.

**CAN THERE BE VACCINES AGAINST ALL DISEASES?**

1. Vaccination is a very important part of family and public health. Vaccines prevent the spread of contagious, dangerous, and even deadly diseases. These include measles, polio, mumps, chicken pox, whooping cough, diphtheria and HPV.
2. A vaccine is a way to build up your body's natural immunity to a disease. This keeps you from getting and spreading the disease. Vaccines provide a build-up of antibodies before you get sick. That way, you don't have to go through the symptoms of the illness.
3. Recently, there were reports that more children were getting measles because their parents did not vaccinate them in time. Today, vaccines are available for more than 20 life-threatening diseases such as chicken pox, mumps and tetanus. Vaccines have saved the lives of millions since they were introduced. Small pox was wiped out by vaccination.
4. Vaccines are made from weakened or dead germs. When injected into a human body, these vaccines stimulate the body to form antibodies (special proteins produced by the body to fight bacteria and viruses). Thereafter, if the same kinds of disease germs enter our body, these antibodies attack the invading germs and destroy them.
5. One cannot be vaccinated against genetic disorders like haemophilia, albinism, colour blindness, and so on, as these diseases are not caused by bacteria or viruses. Scientists have identified more than 100 different viruses that can cause common cold, but a vaccine against common cold will not work because a specific antibody is effective only against a specific kind of bacterium or virus.
6. Although mankind has got vaccines against some varieties of Covid-19, the virus is mutating fast and is making the existing vaccines less effective or totally ineffective.
